Maritime Freight Crisis – Route Optimization System

Infosys Springboard – Milestone 1

Overview

This milestone builds the user authentication module for the project using Streamlit and Python. It covers account creation, login, password recovery, and separate dashboards for users and admins.

Features

- User Login (username or email and password)
- User Signup with a security question
- Forgot Password with recovery using a Security Question or an Email OTP
- User Dashboard
- Admin Login and Admin Dashboard
- Display of registered users' usernames and email addresses

Tech Stack

Component	Purpose
Python	Application logic
Streamlit	Web interface
SQLite	User data storage
JWT	Token-based authentication
Gmail OTP	Email-based password recovery
ngrok	Public URL for the Streamlit app
Google Colab	Hosting and running the notebook

How to Run

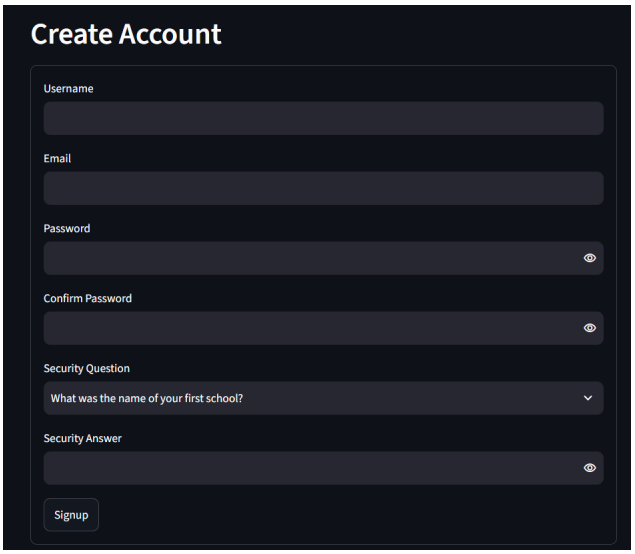

1. Open the notebook in Google Colab.
2. Configure the required secrets in Colab (Gmail app password, JWT secret, ngrok token, admin credentials).
3. Run the notebook cells in order.
4. Open the Streamlit application using the generated ngrok URL.
